

Composition and Method of Use of Medical Test Kit

Abstract of the Disclosure

The present invention is a medical test kit comprising a glucose testing composition, a protein testing composition, a bilirubin testing composition, a bilinogen
5 testing composition, an amylase testing composition, a blood testing composition, a calcium testing composition, a nitrite testing composition, a ketone testing composition and a pH testing composition and a plurality of methods of use for the medical test kit. The medical test kit also comprises a plurality of corresponding indicative spectra to each of its unit such that a health condition of a user is easily be interpreted. Furthermore, an
10 interactive reference chart is provided for guiding a user for the use of the kit of the present invention according to one's personal conditions. The kit is suitable for use for the public and is capable of encouraging self health care of the society.
